*Re: Evaluation of the Teen Safety Matters Curriculum*

*The Teen Safety Matters curriculum hosts an in-depth approach to important social, safety concerns relevant to youth. The program content is age-appropriate with engaging activities, jargon, and realistic situations to positively promote a relatable and impacting learning experience. Exposing the real, true, and even possible dangers of today's world is essential to the success of today's teens. Teen Safety Matters imparts a wealth of knowledge in each 45 minute session that may turn out to be life-saving to a listener. The Facilitator script especially is remarkably detailed in its instruction, alluded references, topic-to-topic transitions, and even responses to the students. Best of all, the level of interaction and involvement the scripts elicit from the students is advantageous to facilitators, as well; presenting to the different grade levels, processing their various replies educates the adults on the mindset of today's young people. Teen Safety Matters is an educational benefit to all parties involved – students, parents, facilitators, and schools.*

*Thank you for the opportunity to review.*
